

Moayad Al-Taleb
software engineer

I'm a passionate software engineer with two years of experience, dedicated to continuous learning and staying updated with the latest technologies and industry trends. I thrive on challenges and enjoy embracing emerging technologies to deliver innovative solutions. My expertise lies in collaborating with cross-functional teams, understanding business requirements, and developing robust and scalable software applications. I'm a problem solver with strong attention to detail and believe in fostering a positive work environment through open collaboration and teamwork. If you're looking for a dedicated and growth-oriented software engineer, let's connect and discuss how I can contribute to your organization's goals.

Continuously learning and staying updated with the latest advancements in Laravel and web development technologies.

Education

2021

Al Baath university Diploma - Computer Technology Institute

Final grade: 75.21

Syrian Virtual University Bachelor - Information Technology

Achievements

2022-2

StarMobile

I was involved in the development of an online platform where users can log in, browse products, and create an account to reserve items. The process involves gaining approval from the main admin before being able to log in and reserve products in a basket. Once the user visits our center, we fulfill their request and provide an invoice.

2022-4

EX-Activities

I played a key role in developing EX-Activities, an online platform where users can browse activities, access details, and engage by submitting evaluations and posts. I also implemented effective advertising features to support activity providers. Contributing to the technical foundation, I helped create a user-friendly platform for seamless activity discovery and engagement.

2022-2

Sy-Koora

The online site I worked on allows users to access and browse information about different clubs. Users can view details about specific clubs, including data collected from the database. Additionally, the site provides access to league information, including details about the leagues and the matches within them. It is an open platform, meaning users can freely explore the site without the need to create an account or log in.

2023-6

Data Automation Project

As a programmer, I developed an advanced electronic platform for the Computer Technical Institute with the aim of enhancing student services. Using PHP and MySQL, I created a user-friendly website that simplifies administrative tasks and enhances the student experience. The platform offers a wide range of innovative services, including registration information, document submission, and certificate requests. Additionally, I implemented features that facilitate access to examination results and important announcements. By replacing the paper-based system, the platform saves time and effort for both students and staff. Overall, my goal was to simplify student life and improve service delivery at the institute.

2023-2

Luxury scents shop

I have developed a website for a perfume store. Customers can browse different product categories, view product details through images, and create their own perfumes by selecting the desired composition. The website also offers filtering options to help customers find specific products. To make a purchase, customers need to create an account or log in. They can then enter their shipping information for delivery or choose to pick up their order from the store.
